

## Announcing Orion Multi-Trader V8.0 Major Enhancements

### New Options Spread Trading Capabilities

Rapidly create, monitor, and execute multi-leg option strategies with Orion Multi-Trader's (OMT) options spread trading tools for both futures and equity options. You can track custom spread prices in real-time from the quote pages and link them to a ladder or trade ticket for one-click order entry. OMT provides portfolio analytics to analyze your potential options payoffs for both existing and planned orders/positions. OMT also has an options spread ticket that you can populate straight from the options chain.

### Enhanced Charts and Floating Workspaces

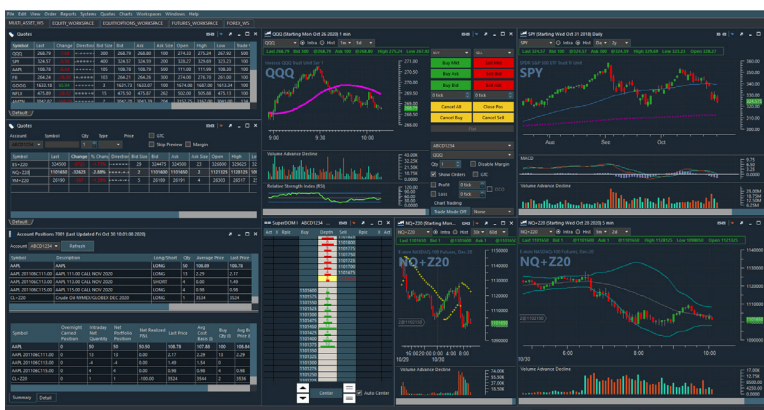

OMT charts have additional indicators available with easy to set defaults. You can create indicator templates which speeds creation of new chart windows with your favorite layouts. With OMT's "light charts", you can run 50+ real-time charts simultaneously without sacrificing performance. Traders with multiple monitors can float individual windows or full workspaces/layouts across their monitors to create their ideal layout.

### Improved Market Data and Trading Capability

OMT now offers enhanced options-focused data. You can stream real-time Greeks and get quotes for CBOE market indices that support your index options trading. Trading has been improved to make even the most complex multi-leg options trades easier and faster. You can link charts, option chains, and spread quotes to alert, trigger orders, or set up one-click entry for trades.

### New Automated Systems with Support for Equity Trading

Automated systems can now trade both futures and equities. OMT offers an automated trading toolkit that lets you design, execute, and monitor customized automated strategies without writing any code. And you can test your new system in real-time without risking any money using our paper trading capability. With this update to Version 8.0, OMT now offers the power of these tools to equity traders as well as futures traders.
